Sammendrag

Elvetilførselsprogrammet (RID) har overvåket forurensingstilførsler til kysten siden 1990. Det måles på åtte tungmetaller, seks næringsstoff-fraksjoner, samt PCB, lindan, organisk karbon, suspenderte partikler, pH og ledningsevne. Tilførsler beregnes til hele norskekysten fordelt på de fire havområdene Skagerrak, Nordsjøen, Norskehavet og Barentshavet. I 2009 ble det utført en omfattende gjennomgang av datasettet i RID slik at det nå er mer helhetlig og korrekt enn tidligere. Oppdaterte data finnes i databaser (bl.a. Vannmiljø og den europeiske RID-databasen). Det er laget en rapport som en oppdatert oversikt over resultatene fra 20 år med overvåking av forurensingstilførsler til norske kystområder (TA-2857/2011). I sammenheng med denne rapporten gis det også ut to datarapporter fra de 20 årene med overvåking: 1) Vannkjemi i RID-elvene (denne rapporten) og 2) Tilførsler til havområdene (TA-2869/2011).

Fire norske emneord	Fire engelske emneord
1. Elvetilførsler	1. Riverine inputs
2. Direkte tilførsler	2. Direct discharges
3. Norske kystområder	3. Norwegian coastal waters
4. Overvåking	4. Monitoring

Forord

Elvetilførselsprogrammet (Riverine Inputs and direct Discharges - RID) administreres av Klif og måler tilførsler av næringssalter og utvalgte miljøgifter til norske havområder. Programmet som har pågått siden 1990 skal gi en årlig kvantitativ vurdering av alle tilførsler via vassdrag, arealavrenning og direkte utslipp av utvalgte forurensningskomponenter til kyst- og havområder som omfattes av Oslo/Paris-konvensjonen (OSPAR). Programmet består av 10 hovedelver som overvåkes månedlig og 36 mindre vassdrag som overvåkes kvartalsvis.

Det er laget en rapport som en oppdatert oversikt over resultatene fra 20 år med overvåking av forurensingstilførsler til norske kystområder (TA-2857/2011). I sammenheng med denne rapporten gis det også ut to datarapporter fra de 20 årene med overvåking:

Datarapport 1. Vannkjemi i RID-elvene (denne rapporten)
Datarapport 2. Tilførsler til havområdene (TA-2869/2011)

Data fra programmet finnes forøvrig i offentlig tilgjengelige databaser, inkludert Vannmiljø.

Elvetilførselsprogrammet administreres av Klima- og forurensningsdirektoratet (Klif) ved saksbehandler Pål Inge Hals. Programmet utføres for Klif av Norsk insitutt for vannforskning (NIVA) i samarbeid med Bioforsk og Norges vassdrags- og energidirektorat (NVE).

Tore Høgåsen (NIVA) har vært hovedansvarlig for sammenstillingen av denne datarapporten.

Oslo, November 2011

Øyvind Kaste
Prosjektkoordinator

Innhold

Datatabeller – Vannkjemi i RID-elvene 10

Datatabeller – Vannkjemi i RID-elvene

Tabellene viser vannkjemiske resultater fra hovedelvene og bielvene, samt vannføring på datoene prøvene er tatt.

Parametre:

SPM	Suspendert partikulært materiale
TOC	Totalt organisk karbon
PO4-P	Fosfat
TOTP	Totalt fosfor
NO3N	Nitrat
NH4-N	Ammonium
TOTN	Totalt nitrogen
SiO2	Silikat
As	Arsen
Pb	Bly
Cd	Kadmium
Cu	Kobber
Zn	Sink
Ni	Nikkel
Cr	Krom
Hg	Kvikksølv
HCHG	Lindan
SUMPCB	Polyklorerte bifenyler

For nærmere beskrivelse av analyseparametre og metodikk vises det til hovedrapporten (TA-2857/2011)

Tittel
Elvetilførselsprogrammet (RID) - 20 års overvåking av tilførsler til norske kystområder (1990-2009). Datarapport 1 – Vannkjemi i RID-elvene

Sammendrag
Elvetilførselsprogrammet (RID) har overvåket forurensingstilførsler til kysten siden 1990. Det måles på åtte tungmetaller, seks næringsstoff-fraksjoner, samt PCB, lindan, organisk karbon, suspenderte partikler, pH og ledningsevne. Tilførsler beregnes til hele norskekysten fordelt på de fire havområdene Skagerrak, Nordsjøen, Norskehavet og Barentshavet. I 2009 ble det utført en omfattende gjennomgang av datasettet i RID slik at det nå er mer helhetlig og korrekt enn tidligere. Oppdaterte data finnes i databaser (bl.a. Vannmiljø og den europeiske RID-databasen). Det er laget en rapport som en oppdatert oversikt over resultatene fra 20 år med overvåking av forurensingstilførsler til norske kystområder (TA-2857/2011). I sammenheng med denne rapporten gis det også ut to datarapporter fra de 20 årene med overvåking: 1) Vannkjemi i RID-elvene (denne rapporten) og 2) Tilførsler til havområdene (TA-2869/2011).

Om Statlig program for forurensningsovervåking

Statlig program for forurensningsovervåking omfatter overvåking av forurensningsforholdene i luft og nedbør, skog, vassdrag, fjorder og havområder. Overvåkingsprogrammet dekker langsiktige
undersøkelser av:

- overgjødsling
- forsuring (sur nedbør)
- ozon (ved bakken og i stratosfæren)
- klimagasser
- miljøgifter

Overvåkingsprogrammet skal gi informasjon om tilstanden og utviklingen
av forurensningssituasjonen, og påvise eventuell uheldig utvikling på et
tidlig tidspunkt. Programmet skal dekke myndighetenes informasjonsbehov om forurensningsforholdene, registrere virkningen av iverksatte tiltak for å redusere forurensningen, og danne grunnlag for vurdering av nye tiltak.
Klima- og forurensningsdirektoratet er ansvarlig for gjennomføringen av overvåkingsprogrammet.
