Sammendrag/Summary

Rapporten inneholder et data atlas over hydrografiske målinger tatt fra F/F "Trygve Braarud" i Ytre Oslofjord i juni og august 1988. Atlaset inneholder konturplott av temperatur, saltholdighet, tetthet og geostrofisk strøm for en rekke snitt i fjorden.

INNLEDNING

Denne rapporten inneholder et atlas over hydrografiske målinger (temperatur, saltholdighet, tetthet) utført med en CTD sonde fra F/F "Trygve Braarud". Observasjonene ble foretatt i tidsrommene 13-16 juni og 2-5 august 1988. Ansvarlig for målingene og denne presentasjonen er Veritas Offshore Technology and Services A/S. Under toktene med F/F "Trygve Braarud" var Atle Lohrmann og Finn-Erik Dahl ansvarlige for datainnsamlingen. Presentasjonene i denne rapporten er utarbeidet av Bruce Hackett.

1. INSTRUMENTERING OG DATAINNSAMLING

Dataene som presenteres her ble samlet med en Neil Brown Instrument Systems CTD sonde. Sonden måler temperatur og ledningsevnen med et tidsintervall på 32 ms. Utført fra fartøyet gir den en vertikalprofil av temperatur, saltholdighet og tetthet. Med en låringshastighet på 0.7 m/s er vertikaloppløsningen ca. 2 cm.

Dataene ble logget på 9-spors magnetbånd. En tilkoplede terminal muliggjør en grafisk presentasjon av rådataene under selve innsamlingen. Opplysning om fartøyets posisjon o.l. legges inn manuelt.

Under junitoktet ble det utført rundt 35 CTD profiler. Imidlertid ble det feil i overføring til magnetbånd, slik at en del av dataene ble overskrevet. Det endelige antall registrerte profiler er 27. Tabell 1 gir en oversikt over de brukbare profiler.

Under augusttoktet ble det utført 45 CTD profiler. Samtlige ble registrert korrekt på magnetbånd. Tabell 2 gir en oversikt over profilene fra august.

2. DATAPROSESSERING

Etter avsluttet tokt ble magnetbåndene lest og dataene prosessert ved Veritas Offshore Technology and Services A/S. Råverdiene av trykk, temperatur og led-

VERITEC

Veritas Offshore Technology and Services A/S

ningsevne ble midlet over dybdeintervaller på 2m. Fjerning av dårlige data ble foretatt samtidig. Saltholdighet og tetthet ble så beregnet for senere presentasjon og analyse.

Ingen post-kalibrering av sonden er blitt foretatt. Man regner med at dette ikke er et stort faremoment da variasjonene i fjorden er meget store.

3. DATAPRESENTASJON

En viktig hensikt med toktene var å skaffe opplysning om transport inn og ut av ytre Oslofjord (Fig. 1). Det hydrografiske stasjonsnett ble dermed lagt ut i snitt tvers av fjorden. I tillegg var det av stor interesse å lokalisere den Baltiske Strømmen i nordlige Skagerrak. Presentasjonen er derfor konsentrert på vertikalsnitt. Fig. 2 og 3 gir en oversikt over snittenes posisjon.

For å sikre en fullstendig dokumentasjon finnes det en listing av 2m midlene etter figurene.

Vertikalsnittene er presentert som konturplott av temperatur, saltholdighet og tetthet (σ_t). For noen av snittene er det også beregnet geostrofisk hastighet gjennom snittet. For disse beregningene valgte man å bruke et nullstrømsnivå på 20m. Dette er riktignok en meget grov gjetning, men den er et forsøk på å lette sammenlikningen med den numeriske modellen.

Alle snitt er presentert slik at en ser nærmest mot nord. Når det gjelder de geostrofiske hastighetsplottene, medfører dette at positive hastigheter er rettet inn i arket og negative hastigheter er rettet ut av arket.

a. Beskrivelse av konturplottene

Vertikalaksen er gitt i desibar. 1 dbar \approx 1 meter.

Tallene langs toppen av plottet er stasjonsnumrene.

"+" indikerer største observasjonsdyp for hver profil.

Posisjonene er gitt i desimal grader.

VERITEC

Veritas Offshore Technology and Services A/S

4. KOMMENTARER

For 2 stasjoner ble det ikke registrert gode data i de øverste 30m.

I det ene tilfelle, nemlig stasjon T1 i juni, ble stasjonen rett og slett utelatt i plottene. Ikke bare var det mangel på data i det viktigste dybdeområdet men i tillegg var det et 3 timers opphold mellom denne stasjonen og de øvrige i snittet. I det andre tilfelle, H3 i august, har man valgt å maskere vekk det området på plottene der konturingsrutinen har ekstrapolert.
