Tittel Elvetilførselsprogrammet (RID) - 20 års overvåking av tilførsler til norske kystområder (1990-2009). Datarapport 1 – vannkjemi i RID-elve 	Løpenr. (for bestilling) 6252-2011 TA-2868/2011 SPFO-1113/2011	Dato November 2011
	Prosjektnr. O-27261	Sider 78
	Fagområde Overvåking	Distribusjon Fri
Forfattere: Høgåsen, T., Skarbøvik E., Stålnacke, P., Selvik, J.R., Aakerøy, P.A., Kaste, Ø.	Geografisk område Norge	Trykket NIVA

Oppdragsgiver(e) Klima og forurensningsdirektoratet (Klif)	Oppdragsreferanse Pål Inge Hals
---	------------------------------------

**Sammendrag**

Elvetilførselsprogrammet (RID) har overvåket forurensingstilførsler til kysten siden 1990. Det måles på åtte tungmetaller, seks næringsstoff-fraksjoner, samt PCB, lindan, organisk karbon, suspenderte partikler, pH og ledningsevne. Tilførsler beregnes til hele norskekysten fordelt på de fire havområdene Skagerrak, Nordsjøen, Norskehavet og Barentshavet. I 2009 ble det utført en omfattende gjennomgang av datasettet i RID slik at det nå er mer helhetlig og korrekt enn tidligere. Oppdaterte data finnes i databaser (bl.a. Vannmiljø og den europeiske RID-databasen). Det er laget en rapport som en oppdatert oversikt over resultatene fra 20 år med overvåking av forurensingstilførsler til norske kystområder (TA-2857/2011). I sammenheng med denne rapporten gis det også ut to datarapporter fra de 20 årene med overvåking: 1) Vannkjemi i RID-elve (denne rapporten) og 2) Tilførsler til havområdene (TA-2869/2011).

Fire norske emneord 1. Elvetilførsler 2. Direkte tilførsler 3. Norske kystområder 4. Overvåking	Fire engelske emneord 1. Riverine inputs 2. Direct discharges 3. Norwegian coastal waters 4. Monitoring

## Forord

Elvetilførselsprogrammet (Riverine Inputs and direct Discharges - RID) administreres av Klif og måler tilførsler av næringssalter og utvalgte miljøgifter til norske havområder. Programmet som har pågått siden 1990 skal gi en årlig kvantitativ vurdering av alle tilførsler via vassdrag, arealavrenning og direkte utslipp av utvalgte forurensningskomponenter til kyst- og havområder som omfattes av Oslo/Paris-konvensjonen (OSPAR). Programmet består av 10 hovedelver som overvåkes månedlig og 36 mindre vassdrag som overvåkes kvartalsvis.

Det er laget en rapport som en oppdatert oversikt over resultatene fra 20 år med overvåking av forurensingstilførsler til norske kystområder (TA-2857/2011). I sammenheng med denne rapporten gis det også ut to datarapporter fra de 20 årene med overvåking:

Datarapport 1. Vannkjemi i RID-elvene (denne rapporten)

Datarapport 2. Tilførsler til havområdene (TA-2869/2011)

Data fra programmet finnes forøvrig i offentlig tilgjengelige databaser, inkludert Vannmiljø.

Elvetilførselsprogrammet administreres av Klima- og forurensningsdirektoratet (Klif) ved saksbehandler Pål Inge Hals. Programmet utføres for Klif av Norsk insitutt for vannforskning (NIVA) i samarbeid med Bioforsk og Norges vassdrags- og energidirektorat (NVE).

Tore Høgåsen (NIVA) har vært hovedansvarlig for sammenstillingen av denne datarapporten.

Oslo, November 2011

Øyvind Kaste  
Prosjektkoordinator

## **Innhold**

<b>Datatabeller – Vannkjemi i RID-elve</b> .....	<b>10</b>
--	-----------

## Datatabeller – Vannkjemi i RID-elve

Tabellene viser vannkjemiske resultater fra hovedelvene og bielvene, samt vannføring på datoene prøvene er tatt.

Parametre:

<b>SPM</b>	Suspendert partikulært materiale
<b>TOC</b>	Totalt organisk karbon
<b>PO4-P</b>	Fosfat
<b>TOTP</b>	Totalt fosfor
<b>NO3N</b>	Nitrat
<b>NH4-N</b>	Ammonium
<b>TOTN</b>	Totalt nitrogen
<b>SiO2</b>	Silikat
<b>As</b>	Arsen
<b>Pb</b>	Bly
<b>Cd</b>	Kadmium
<b>Cu</b>	Kobber
<b>Zn</b>	Sink
<b>Ni</b>	Nikkel
<b>Cr</b>	Krom
<b>Hg</b>	Kvikksølv
<b>HCHG</b>	Lindan
<b>SUMPCB</b>	Polyklorerte bifenyler

For nærmere beskrivelse av analyseparametre og metodikk vises det til hovedrapporten (TA-2857/2011)

<p><b>Tittel</b>                  Elvetilførselsprogrammet (RID) - 20 års overvåking av tilførsler til norske kystområder (1990-2009).                  Datarapport 1 – Vannkjemi i RID-elvne</p>
---

<p><b>Sammendrag</b>                  Elvetilførselsprogrammet (RID) har overvåket forurensingstilførsler til kysten siden 1990. Det måles på åtte tungmetaller, seks næringsstoff-fraksjoner, samt PCB, lindan, organisk karbon, suspenderte partikler, pH og ledningsevne. Tilførsler beregnes til hele norskekysten fordelt på de fire havområdene Skagerrak, Nordsjøen, Norskehavet og Barentshavet. I 2009 ble det utført en omfattende gjennomgang av datasettet i RID slik at det nå er mer helhetlig og korrekt enn tidligere. Oppdaterte data finnes i databaser (bl.a. Vannmiljø og den europeiske RID-databasen). Det er laget en rapport som en oppdatert oversikt over resultatene fra 20 år med overvåking av forurensingstilførsler til norske kystområder (TA-2857/2011). I sammenheng med denne rapporten gis det også ut to datarapporter fra de 20 årene med overvåking: 1) Vannkjemi i RID-elvne (denne rapporten) og 2) Tilførsler til havområdene (TA-2869/2011).</p>

## Om Statlig program for forurensningsovervåking

Statlig program for forurensningsovervåking omfatter overvåking av forurensningsforholdene i luft og nedbør, skog, vassdrag, fjorder og havområder. Overvåkingsprogrammet dekker langsiktige undersøkelser av:

- overgjødning
- forsuring (sur nedbør)
- ozon (ved bakken og i stratosfæren)
- klimagasser
- miljøgifter

Overvåkingsprogrammet skal gi informasjon om tilstanden og utviklingen av forurensningssituasjonen, og påvise eventuell uheldig utvikling på et tidlig tidspunkt. Programmet skal dekke myndighetenes informasjonsbehov om forurensningsforholdene, registrere virkningen av iverksatte tiltak for å redusere forurensningen, og danne grunnlag for vurdering av nye tiltak. Klima- og forurensningsdirektoratet er ansvarlig for gjennomføringen av overvåkingsprogrammet.
